Noise – Space – Compartments

$$I(C_{\text{polyhedron}})_2S$$

Noisy promoter

Noise-less promoter

- Fluctuations in gene expression over time due to the so-called bursting effect.
- Noise is a problem considering the electric engineering framework.
- Is noise noisy?

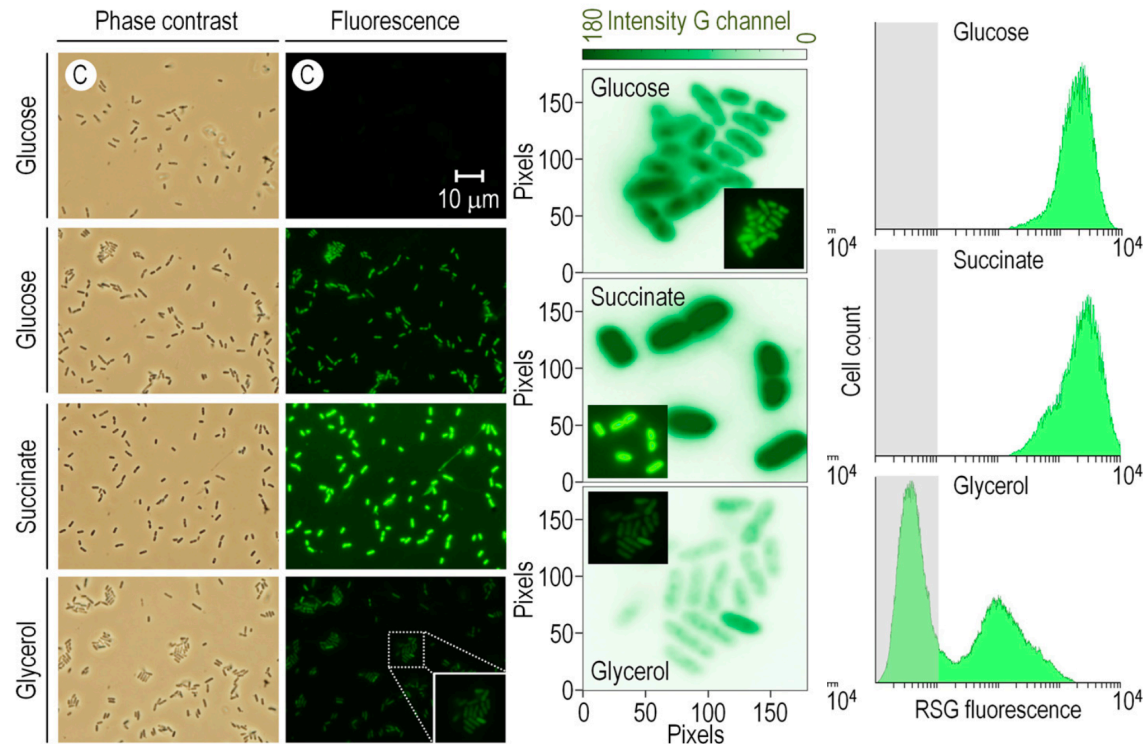

Noise – Space – Compartments

The Glycerol-Dependent Metabolic Persistence of *Pseudomonas putida* KT2440 Reflects the Regulatory Logic of the GlpR Repressor

¹ Deconvolution of Gene Expression Noise into Spatial Dynamics of ² Transcription Factor–Promoter Interplay

³ Ángel Goñi-Moreno,[†] Ilaria Benedetti, Juhyun Kim, and Víctor de Lorenzo^{*ID}

- Gene expression noise correlated to intracellular distance.
- Expression sharp when components close.
- Expression noisy when promoters far.
- Reusability of designs!

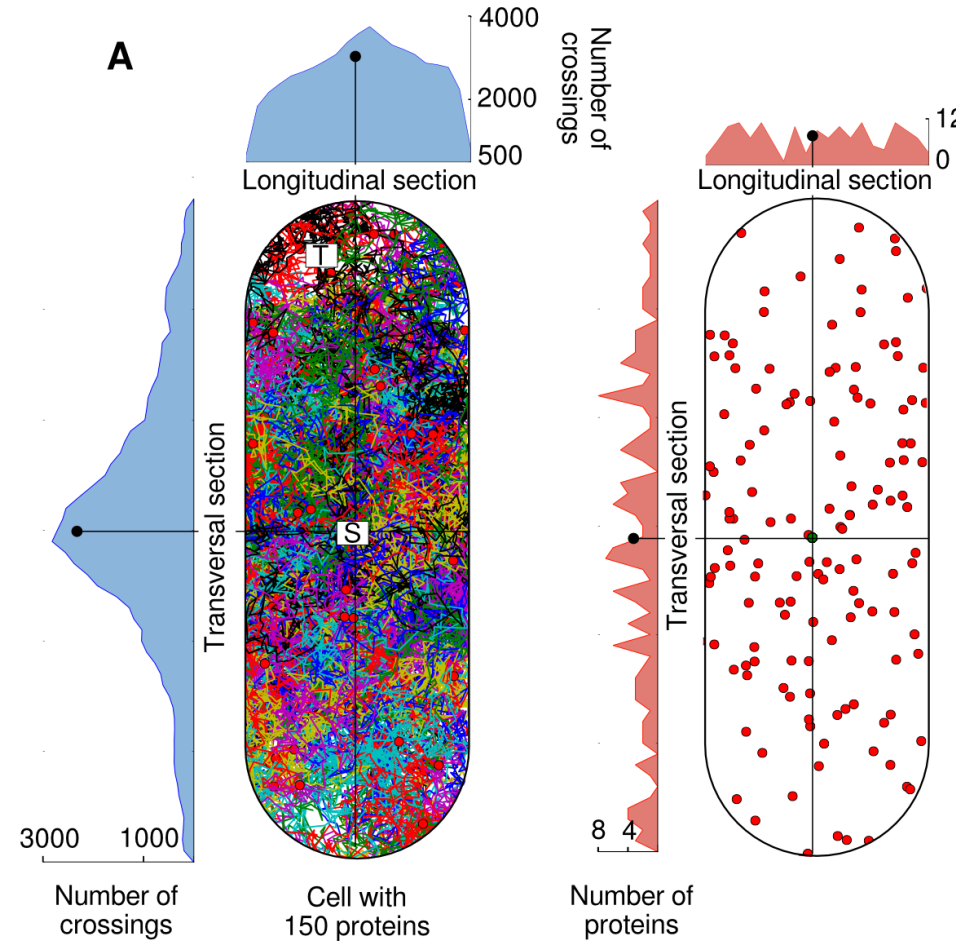

"An intriguing question is whether inter-genetic distance has been exploited as a tool by evolution to fine tune systems to deploy beneficial phenotypes. The corresponding challenge is then to embed spatial constraints as engineering principles to improve the design-build-test-learn lifecycle."

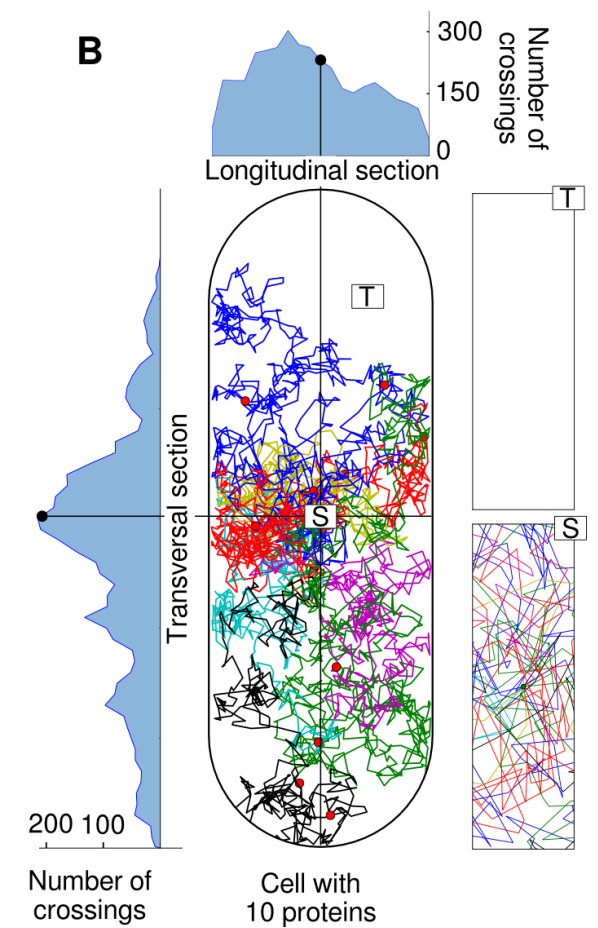

Noise – Space – Compartments

$$I(C_{\text{polyhedron}})_2S$$

- Mathematical models **were** not ready to embed spatial constraints.
- Low TF numbers are needed to maximize fluctuations at longer distances.
- TF time-point distribution vs. time-lapse trajectories.

High TF numbers

Low TF numbers

Noise – Space – Compartments

$$I(C_{\text{polyhedron}})_2S$$

TF remains bound:

- 1D sliding
- Low searching time
- Unlikely at long distances

TF unbinds into bulk:

- 3D diffusion
- Slow(er) searching time
- Reach long distances

Noise – Space – Compartments

$$I(C_{\text{polyhedron}})_2S$$

- Promoter activity (inducible promoter): the further, the less.
- Performance switches relatively quickly at specific intervals.

Noise – Space – Compartments

$$I(C_{\text{polyhedron}})_2S$$

- The model can now reproduce the experiments by changing **ONLY** space between components. All other rates untouched.
- Noise patterns are not just random fluctuations!

Noise – Space – Compartments

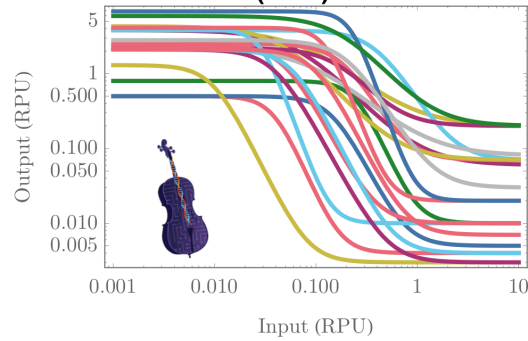

$$I(C_{\text{3D}})_2S$$
